

1. Create a simple cloud software application and provide it as a service using any Cloud Service Provider to demonstrate Software as a Service (SaaS)

Step1: open zoho and click on forms

The screenshot displays the Zoho website interface. At the top, there's a navigation bar with the Zoho logo, links for Products, Customers, and Company, and a search icon. Below the navigation bar, a banner features the headline "Your life's work, powered by our life's work" and a sub-headline "A unique and powerful software suite to transform the way you work. Designed for businesses of all sizes, built by a company that values your privacy." A red button labeled "ACCESS YOUR APPS" is positioned below the sub-headline. To the right of the banner, a section titled "FEATURED APPS" lists three applications: CRM (Convert leads and close sales deals faster), Books (Powerful financial platform for growing businesses), and Mail (Secure email service for your business). Below the banner, a sidebar on the left lists various app categories: Apps (Sales, Marketing, Service, Finance, Email & Collaboration, HR, Legal, Security & IT Management, BI & Analytics, Project Management, Developer Platforms), Suites (Zoho One), and Marketplace. The main content area displays a grid of app tiles. The tiles include CRM (Convert leads and close sales deals faster), Forms (Build online forms for every business need), SalesIQ (Live-chat app to engage and convert website visitors), Bookings (Appointment scheduling app for consultations with customers), Bigin (Pipeline management solution for customer-facing teams), and Sign (Digital signature app for businesses). Each tile has a "TRY NOW" button. At the bottom of the page, there are links for "Mobile Apps" and "Beta" versions.
